

March 28, 2017

To whom it may concern,

I delivered an invited Keynote Lecture "Toward the development of predictive capability of combustion phenomena for transport fuels" at the 1st International Symposium on Energy Challenges and Mechanics. The Symposium was very successful in bringing world experts in various disciplines together and discussing the global energy issues, thanks to the excellent organization by Prof. Henry Tan.

It is my pleasure to strongly recommend the organization of the International Symposium on Energy, which is a continuation of the above symposium organized by Prof. Henry Tan.

Energy issue is a vital element to be resolved in the near future and it is timely to organize a meeting concerning the issue, which is multi-disciplinary in nature.

Best wishes.

Sincerely yours,

Suk Ho Chung  
Professor Emeritus in Mechanical Engineering  
Clean Combustion Research Center  
King Abdullah University of Science and Technology (KAUST)  
Saudi Arabia
