Re: Impact of International Symposium on Energy

After attending the 6th International Symposium on Energy, I wanted to let everyone know how impressed I was with the organizing abilities of Dr. Henry Tan. This conference was held at the beautiful Kingsmills Hotel in Inverness, Scotland. The sessions were well organized and informative with excellent speakers and session chairs. Everything ran on time and many of the participants expressed their interest in future conferences put together by Dr. Henry Tan and his staff. It also didn't hurt that Inverness is next to Loch Ness, one of the most scenic areas in Scotland.

Dr. Henry Tan works hard to make sure that the most challenging areas are explored in his conferences. For example, currently there are tremendous research efforts being made to develop new electrode materials that can provide a large amount of energy in a short period of time. I was invited to deliver a Plenary Lecture entitled "Graphene-based Electrochemical Capacitors", to highlight ongoing research activities and address the main challenges we face.

Sincerely,

A handwritten signature in black ink that reads "Richard B. Kaner".
